Vortical Enclosure Dynamics — Navigation Schematic

axiom: 差がある (there is difference)

$C = 1 - \exp(-\lambda \rho H),\ \rho = \Sigma C,\ d\tau/dt = \rho$

model candidate

proposed metric

breakdown

PARTICLES

triangular closure attractors

$m \propto 1/\Delta^2$

SU(3) SU(2) U(1)

GRAVITY

vorticity-driven geometry

$\nabla^2 \Psi \propto L,\ G = f(\kappa_B, \varepsilon, \lambda)$

BLACK HOLE

fixed-point breakdown

$\sigma > 0$ reignites

$L \to L_{max}$ (forbidden)

COSMOLOGY

sustained log-generation $\sigma > 0$

$d\rho/d\tau + 3\gamma\rho^2 = \sigma(\rho)$ · BH interior ↔ early universe

** discrete-to-field bridge OPEN · schematic roles: formal · effective · OPEN · candidate*
